

Intro to user engagement

Aim

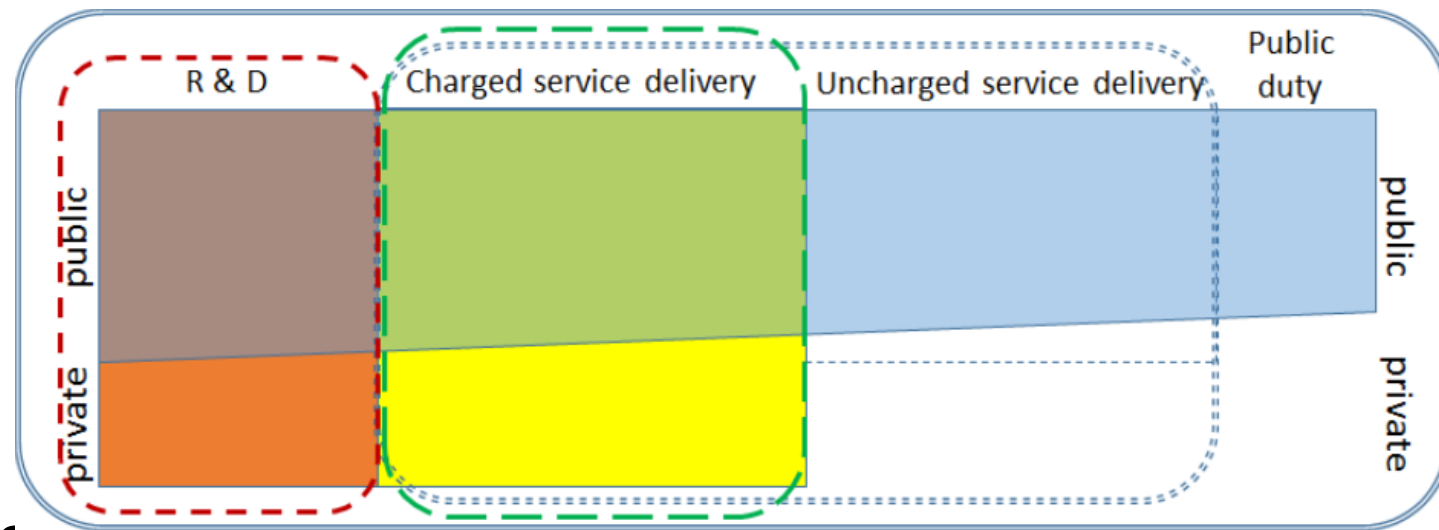

- Nurturing existing user community
- Broaden the use of the climate data and tools developed and provided through the IS-ENES projects
 - Collect user requirements and co-construction to adapt tools for easier use
 - Demonstration, training and support in use of the data and tools in interdisciplinary work

Already activities to broaden user community in earlier IS-ENES projects (esp. Climate4Impact portal)

Potential users

- Climate modelers
- Other climate researchers
- Impact researchers
- (Commercial) climate services providers

Special attention to include users from eastern Europe

Activities and ideas behind them

- Demonstrations and short trainings on Climat4Impact portal, ESGF, standards, etc.
 - First introduction, making people aware of the data and tools
 - Short introduction on how to use them, giving possibility to explore the data/tools with some personal guidance

Further activities (e.g. webinars) and guidance material needed to get potential users to use the data and tools and to support them

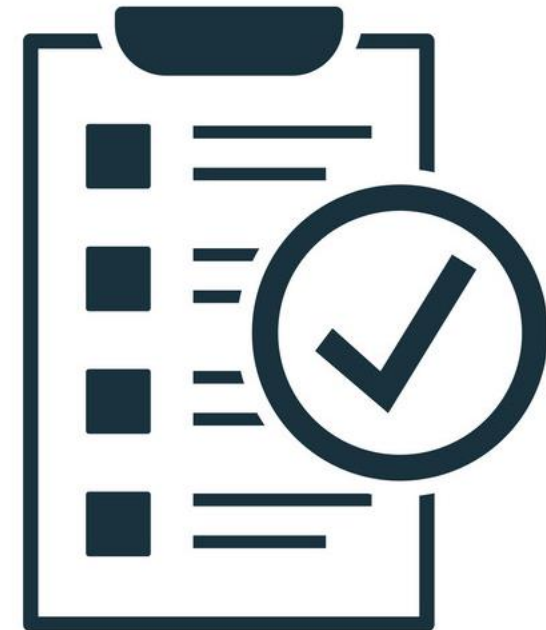

Activities and ideas behind them

- Schools (2 * 1-week on climate data and impacts, 1 2-week on Climate Data Science)
 - More in depth training and options to practice with the data and tools
 - Creation of networks and contacts
 - Creation of background material, guidance and use examples

Activities and ideas behind them

- Standards for climate indices, vocabularies, provenance, CF, etc.
 - To make it easier for users to find and use data and tools
 - Include representatives from various user groups to collect user requirements and to check whether proposed solutions work (co-production, co-construction)

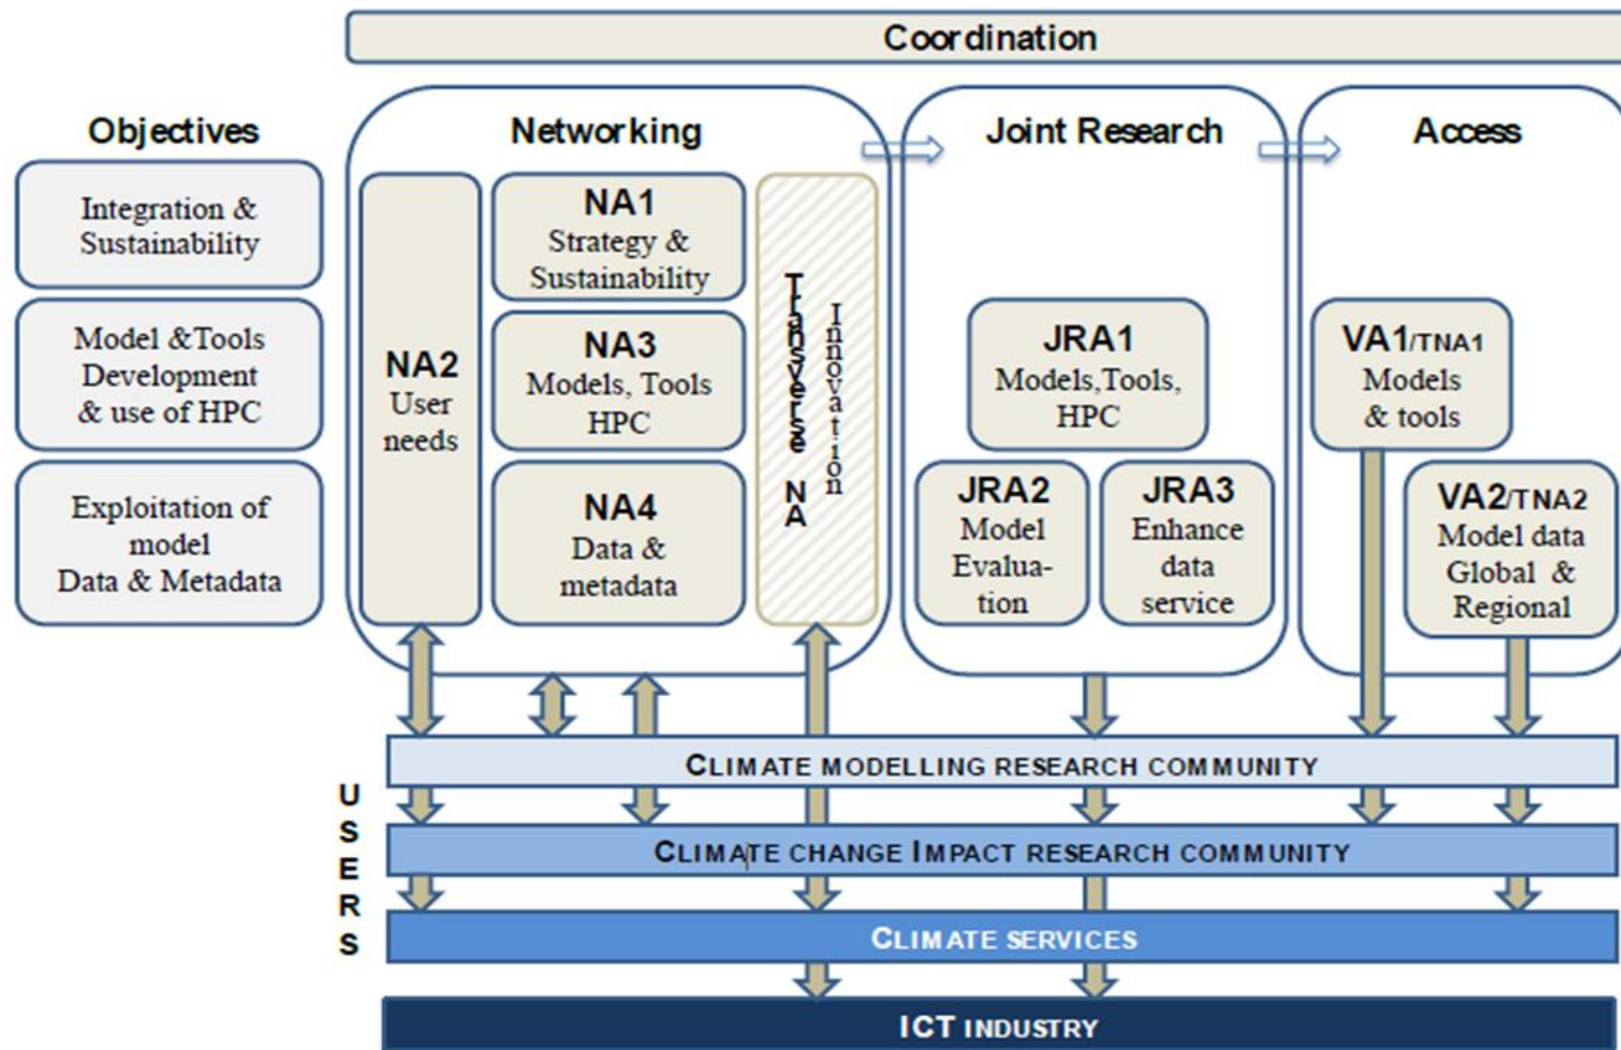

(User) requirements

- From user point of view
 - focus more on easiness of use, good metadata and guidance material
- From provider point of view:
 - focus more on technical aspects
 - but also on how the data are presented, how tools work

Not only an
activity of
WP3-NA2

Assistance of
many other
WPs needed:
contacts,
trainings,
requirements, etc.

- Ideas for more or different user engagement?
- Ideas to reach more easily new groups of users?

THE CONSORTIUM

Coordinated by CNRS-IPSL, the IS-ENES3 project
gathers 22 partners in 11 countries

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement N°824084
